

IN THE ABSTRACT~~A b s t r a c t~~ ABSTRACT OF THE DISCLOSURE

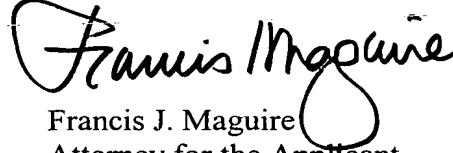

~~The invention relates to a~~ A device 22 ~~comprising~~ includes a communication system transceiver 40 for exchanging signals in a first frequency band and a receiver 30 for receiving signals in a second frequency band. In order to improve the performance of the ~~receiver, receiver,~~ it is proposed that the device comprises a A processing portion 34 of the devices detects ~~detecting~~ the presence of signals interfering with the signals in the second frequency band and also. ~~The processing portion further~~ determines a timing pattern for interfering signals based on a timing information which is indicative of the timing for transmissions employed by the transceiver 40. ~~The processing portion then causes a manipulation~~ A manipulation of signals reaching the receiver 30 during intervals defined by the determined timing pattern is then done, in order to reduce a performance degradation due to interfering signals originating from a transmitter 21 employing the same timing for transmissions as the transceiver 40. ~~The invention relates equally to a corresponding~~ A corresponding method is also disclosed.

REMARKS

This preliminary amendment is submitted for the purpose of placing the application into standard U.S. format, to correct certain informalities in the text, and to amend the drawing sheets 1 and 2 which are in the Appendix marked "Replacement Sheets" and "Annotated Sheets".

Respectfully submitted,

A handwritten signature in black ink that reads "Francis J. Maguire". The signature is written in a cursive style with a large, looping "F" and "M".
